Electrostatically conductive PVC tiles from Fortelock

Unique flooring that ensures the elimination of electrostatic discharges. It is mainly used in laboratories, data centers, the pharmaceutical and electrical engineering industries, even in potentially explosive atmospheres.

To provide a complete and functional ESD flooring system, we supply ESD tiles with grounding tape and grounding kit, which includes a plug, connecting cable, connecting rivet, metal grounding element and Cu self-adhesive tape.

These highly durable and easy-to-maintain tiles are good for areas with heavy-duty operations, especially because of their thickness of 7 mm, homogeneous material and abrasion resistance. You can depend on the ideal combination of stable and reliable conductivity and the proven durability of ESD floors.

- > Excellent electrical conductivity
- > Grounding kit and grounding tape with each order
- > Installation possible on standard solid floors (wood, concrete,...)
- > No need for gluing or attaching
- > Easy maintenance
- > Durable PVC
- > Czech product

Colors	Bottom	Pattern
