### Notes

- Optional
- A neutral (pH 7) nonionic detergent is recommended for printed mats. The use of Alkaline built products is not recommended.
- When extracting perforated mats a single high speed extraction is recommended (maximum G Force 600G). If non perforated mats or mixed loads of perforated mats are being extracted then a split extraction cycle, as below, is recommended to achieve optimum water extraction.
- Due to the abrasive nature of the pile, the logo scraper mat may attract lint if washed with other mat types, it is therefore recommended that logo scraper mats are not mixed with other mat types during washing. If however mixed products are washed together, to minimise the linting, the mats should be tumble dried.

### Split Extraction Cycle and Drying

					
1. Extract	2 mins	Low speed	1. Dry	10-15 mins	Max. 80°C
2. Drain	1 min	Wash Speed	2. Cool down	5 mins	
3. Extract	5 mins	High speed			

### Notes

Lay mats flat following removal from dryer. Allow mats to cool before rolling. Roll mats pile out for delivery. Never store printed mats folded or layed pile to pile when damp, to avoid colour transfer.

## → WHY CHOOSE THIS MAT?

**SuperScape Plus mats feature a multi-directional molded tread pattern that effectively scrapes tough dirt and grime from shoes. The unique drainable borders help filter water off the mat, making it ideal for use outside as a scraper mat or as a slip-resistant mat in wet areas.**

- **Clean** – Multi-directional surface cleats effectively remove and trap dirt and sand below shoe level to prevent tracking; drainable borders filter water off mat
- **Safe** – Slip-resistant even in wet environments; certified high-traction by the National Floor Safety Institute (NFSI)
- **Durable** – Grease/oil proof and chemical resistant
- **Easy to Clean** – Lightweight flexible design ensures easy handling and cleaning (shake off soil and hose off); can be commercially laundered or autoclave sterilized
- **Drainable borders** filter water off the mat while multi-directional surface cleats remove and trap dirt and sand below shoe level to minimize tracking
